SIOUX ORE BODY LARGE AND RICH

Returned Visitors Speak Very Highly of Resource Now Being Opened.

CROSSCUT SIXTY FEET; NEITHER WALL GAINED

Carbonate Ores Still Extend Both Ways Along Strike of the Body.

Several visitors who have just re turned from a trip under ground in the Sioux Consolidated property at Tintie are of the opinion that when an equal amount of development work is done in the Sioux, the management will have as

are of the opinion that when an equal amount of development work is done in the Sioux, the management will have as rich and as extensive an ore body for at lenst 750 feet in length as the Colorado management has for over a thousand feet so far. The visitors speak in glowing terms of the Sioux and its resources. To the Tribune on Tuesday a well known engineer said:

"It is simply impossible right now to gather a very distinct idea as to the Sioux resources. It takes time to open up such a body, but you would have to go a long ways to beat the present showing. On the first level the management drifted under the ore for something like 50 feet to the north of the shaft, and an upraise was sent only a short distance into the ore. The management has stoped and crosscut the body, demonstrating a width so far of 60 feet or more, and beither wall has been brought to view yet.

"I saw a breast of ore on this level that was twenty feet high, and practically every pound of it was a shipping grade of silver-lead carbonate. The only sorting the management has to do is to take out an occasional piece or boulder of quartz. On each direction of this body as far as the strike is concerned there is ore continuing, and as I said, there has been no wall found yet. So it is too early to give the extent of an ore body which is daily increasing.

"All this carbonate ore is of shipping grade, and within it occurs a streak is too early to give the extent of an ore body which is daily increasing.

"All this carbonate ore is of shipping grade, and within it occurs a streak of rock that is from 6 to 8 inches in width. This streak is extremely high-grade horn silver, and you can cut the metal like soap. In addition to this strenk, there is a space of ore between two and four feet in width that carried very rich chlorides and considerable horn silver. All the ore contains some gold values. I consider the Sioux one of the spectacular propositions in the state of Utah, and a fine dividend record is apparently assured."

BULLOCK MINE OPENING UP BIG

In conversation over the long distance phone with Ben Bullock, general manager of the Bullock mine at Enreka, he informs The Tribune that development work is progressing in a most satisfactory manner at the Bullock mine at Eureka, and that everything is now being shaped up for the purpose of becoming a regular producer, and at the present time a carload of high-grade silver-lead and copper ore is being loaded for the smelter. The double compartment shaft is now down 105 feet, and a new contract for an additional bundred feet will be let in a few days. The gasoline hoist recently installed is working perfectly. The winze sunk on the Aspinwall vein to the 200-foot level proves that this ore body increases in size and value as depth is obtained. Mr. Bullock says the mine is improving daily, and with the double compartment shaft completa to the 200-foot level, it will be in condition to ship regularly. dition to ship regularly.

MINING CONGRESS TO HOLD NOTABLE SESSION

John Deru, director of the American Mining congress, has received a letter from Secretary J. F. Callbreath of the association, now at Pittsburg, in which be says the coming session of the con-gress promises to be a notable one, and that the Pittsburg people are giving very satisfactory co-operation. The preliminary work of the session is well under way. The hope is expressed that Utah will send a large delegation to this session, as questions of vital interest to the mining industry in the West

New York Letter.

New York Letter.

James A. Poliock & Co., bankers and brokers, 6 West Second South street, furnished the following received over their private wire yesterday afternoon:

Walker Letter—The market today was very active and in most cases strong. There were evidences of long public buying, and the domand continued all day. Union Pacific and Southern Pacific were the features. Many of the inactive issues were taken up and the tractions were bid up. The indications of the market all day were very good, and there was little let-up in the demand for stocks. We look for an active traders' market for the rest of the week.

Wasatch Electric Service Co. Incorporated. Armature winding, motors re-paired, bought and sold. No. 46 Post-office Place. Bell phone Main 2216.

Wear the Bellmore, a hat full of value-\$3

Glove Season Here; Gloves Here, Too.

At the head of the list stands the famous blownes, which is ably supported by Eskay's kids and our own brands.

The latest grays in Mocha and Gloss Kid; Suedes for semi-dress wear, and the popular brown and tan shades of Mocha or Finished Kids; silk-lined or unlined. Anywhere from \$1.25 to \$3.00, you can be tastefully gloved.

Our Boys' Department—a store in itself

DUGWAY ORES ARE

Neglected Portion of Mineral Utah Rewards Few Who Are Operating.

BULLION GROUP HAS HIGH-GRADE LEAD ORE

Railroad Badly Needed to Place Good Resources in the Market.

That Dugway, a neglected section of mineral Utah, contains the proporties with which to add greater luster to Utah's fame as a mineral producing state, is the opinion of John P. Nelson, one of the pioneers of that district. Mr. Nelson returned Tuesday

son, one of the pioneers of that district. Mr. Nelson returned Tuesday from his claims at Dugway, the camp being located about 105 miles southwest of Salt Lake City. Mr. Nelson is the owner of over eighty claims throughout this camp, and the energetic campaign of development work that has been carried forward during the past year will be continued by him until he knows exactly what he has. Mr. Nelson said yesterday:

"Dugway needs a railroad, and as the survey of the Clark road comes within a few feet of mv dumps I especially am looking forward with much eagerness to additional word regarding this new enterprise. Dugway right now could be made a steady shipper of silver and lead ores, for a splendid tonnage is available. But we have a wagon haul across sand for fifty-eight miles to Silver City or St. Johns, and that haul naturally wipes most of our profits from the slate.

"One property there owned by Thomas Hineman and myself, called the Bullion group, consisting of three claims, is being prospected by means of a tunnel. We are penetrating a fine lot of galena ore, the rock carrying no less than 60 per cent lead and with fine silver values as well. This ore occurs in a ledge twenty feet in width now being cut by the tunnel, and we have twenty inches of shipping ore like these samples which I brought in with me to have assayed for the silver. I have been interested in Dugway for many years, and deem it one of the best unfouched parts of Utah, and I intend to keep up development work on my properties in spite of the difficulties met with-in getting in supplies and in getting out the ores. Many of my claims are patented, and others will be as soon as this can be lone. Ten miles from the heart of Dugway is the Granite district, where I saw some magnificent silver and gold ore. This is another spot that will come forward with big results as soon as better transportation facilities allow decent working conditions."

REDUCTION OF LEAD TARIFF AROUSES MINE OWNERS

Do the Utah mine operators want a reduction in the tariff on lead, so that other countries can send in such metal to compete with that produced in this country? It they do not, they had better attend the meeting called by the Utah Mine Operators' association, which will be held Friday evening at 8 o'clock in the Commercial club rooms. Local lead producers believe lead has suffered enough, at d that there is no reason to bring down the tariff on this metal coming into this country. The Friday meeting, therefore, will be for the purpose of protesting to the congressional ways and means committee at Washington against the reduction of the present tariff rate on this metal and on Utah products in general. and on Utah products in general.

Ore Shipments. The Pioneer sampler on Tuesday re-leased three cars of ore from Utah and two cars from Nevada camps.

The Taylor & Brunton company re-leased two cars from Utah, three from Nevada and one from Idaho camps.

Drift From Eagle and Blue Bell Opening Up Surprises for Company.

On Tuesday attention was attracted to the operations of the King William Mining company of Tintic, owing to the tapping of a broak in the formation which was somewhat unexpected. The large or main break, which occurs in the blue lime, and which outcrops to a splendid degree, is still ahead of the face of the drift at depth, but an independent break has been found which shows mineralization, the rock from which is now passing through the assayer's fires. It is in these breaks that the great ore bodies occur in the neighbors of the King William, and no time is to be lost in going ahead to the objective point.

The property is an interesting one for several reasons, the main one being that deep work is now in progress on an untoucheed portion of the Tintic district which is surrounded by several great producers of that camp. On the morth the Eagle and Blue Bell adjoins the King William, on the west and south is the Centennial Eureks, and on the south and east is the Grand Central. It is from the 1000-foot level of the Eagle and Blue Bell that the work of drifting into the King William is now being done, and the drift, owing to the difference in elevation of the two properties, is several hundred feet deeper in the King William than in the Eagle and Blue Bell. There is not a more interesting piece of work now under way in Tintic, and local circles are keeping their weather eye on the developments.

Metal Gossip.

James A. Pollock & Co. bankers and brokers, 5 West Second South street, fur-nish the following received over their private wire yesterday afternoon: St. Louis wires: Lead, 34,20; spelter, 24,573 St. Louis wires. Head, \$4,20; speiter, \$4,374;
Boston wires. Foreign visible supply of copper November 15 was 52,835 tons, an increase of 1305 tons.
Boston wires: North Butte dividend, \$1, nayable December 10 to holders of December 5.

Ore and Bullion.

The ore and bullion report for Tucaday, given by McCornick & Co., was as follows: Ore received, \$30,000: bullion shipped, \$40,000.

GOOD COPPER PRICES HELP COPPER STO

The upward and optimistic tendency to the copper market has advance terially the attractiveness of the leading copper stocks, that Hayden, States compiled a table showing the earnings of these copper stocks, as two Utah stocks, the Utah Copper and the Utah Consolidated, figurently in the prosperity that now exists, and the table allows every one get their bearings, it is reproduced as follows:

	No. of Shares	Anny J Production	Cost per lb	Earnings per share låc copper	Strategic and

PROVO INVESTORS BUYING CROWN POINT STOCK

CROWN POINT STOCK

Local brokers are agreed that practically all the buying orders for Crown Point which have been very bountiful of late come from Provo. Provo believes in the Crown Point, a proposition that someone once had the temerity to denominate the only fallure Jesse Knight ever fathered in the Tintle district. That the Crown Point was a fallure was taken from the fact that the Colorado ore body extended south from the Colorado property, instead of swerving toward the east into the Crown Point.

But it is a trifle early yet to call Crown Point a fallure. The property never has been sounded to any reasonable depth, nor has the management ever exerted itself very much up to date in looking far into this territory for resources. Provo believes that the Great Eastern vein will be found mineralized, and they point to the splendid developments on the Iron Blossom from the south shaft. Here the management is drifting over on the 700-foot level to tap the Great Eastern vein, and should it contain ore there the Crown Point stands a pretty good show to get it farther north.

Now all sorts of reports are filling the air. Some say that the Knight management is going to explore at depth the Crown Point territory from the Colorado ground. Should this work be successfully undertaken, there is every reason to expect from the Crown Point property some interesting results. And until that day is gained, or until stockholders get weary of waiting for returns in the shape of ore developments, the Crown Point property some finteresting results. And until that day is gained, or until stockholders get weary of waiting for returns in the shape of ore developments, the Crown Point property some finteresting results. And until that day is gained, or until stockholders get weary of waiting for returns in the shape of ore developments, the Crown Point bids fair to become more attractive from a speculative standpoint on the local exchange. Provo is thus figuring it out.

GOLDFIELD CON. FINDS NEW BODY OF GOLD ORE

We give practically in full a letter received from one of our local correspondents, says Hayden, Stone & Co.

"The Goldfield Consolidated, in running a cross-cut from the Claremont shaft to the Mohawk, ran into a new vein, which gives promise to be a very valuable addition to their present or reserves. The vein is about six feet wide and for the whole six feet will average better than \$30, exclusive of a high grade streak of about nine inches that has averaged up to date something over sixty ounces. This, then, is not the Mohawk vein unless it is a fissure from it, but personally I think it is the extension of the old Mohawk-Jumbo ledge which was in the Wedge Fraction. The Wedge Fraction is the piece of ground that was under litigation between the Mohawk people and the Jumbo Extension. "The work on the new mill has progressed very rapidly in the last two weeks. The steel men will be off the job within the next ten days. The work they are doing now is just finishing up the lower ter, which could be finished up any time without in any way interfering with the working of the mill. The battery floor and the regrinding floor have been turned over, and everything worked smoothly and without a hitch. The crushing plant has been in operation and worked very satisfactorily. The concentrating floor is practically 60 per cent finished. The tables are being put in piace, while all the line shafting is set. Ten days work on the tanks will complete everything, including piping and all. The shell is being put on and is probably 40 per cent finished. This work goes very mindful.

including piping and all. The shell is being put on and is probably 40 per cent finished. This work goes very rapidly, however, and is not of very great impor-tance. On the Laguna the other day, the Hazel Goldfield, which is a lease, struck ore at a depth of 715 feet. It is undoubtedly the Red Top vein.

Mining Notes.

General Manager G W. Lambourne of the Daly Judge company is a Park City visitor today. L. S. Cates, mines manager of the Boston Consolidated company, was in the city Tuesday from Bingham.

A. W. Scott, president of the Scott. Mines company, has left for New York on mining business. mining business.

Tony Jacobson president, and Val Snow, secretary of the Columbus company, are in Alta visiting the mines.

Local stockholders of the Washakie-Newada company, continually are receiving splendid word from this property. The shaft is displaying a full width of gold ore, that averages \$25 per ton.
